Role and Effects of Budgeting in Managerial Practice Aug 27 2019 Seminar paper from the year 2010 in the subject Business economics - Investment and Finance, grade: 1,0, Maastricht University, course: Management Accounting, language: English, abstract: Budgeting is a major area of management accounting and receives a lot of interest from researchers who mainly concentrate their studies on the design of budget schemes and the process of setting budgets. Concerning the use in practice, a survey of senior managers in 219 publicly traded firms indicated that "75 percent thought of the budgetary process as a managerial rather than an accounting function" (Zimmerman, 2009, p. 250). However, the effects of budgets and budget processes on managerial performance and effort are still not clear. This paper aims at providing an overview of a collection of recent research papers to investigate how different types of budgets influence managerial behavior and performance and what implications these findings have for managerial practice. Therefore, in the first section the general role of budgeting in organizations will be described. Next, different

types of budgets and budget levels are introduced and their effects on managerial behavior and performance will be examined. Finally, several implications of those effects for managerial practice will be given, before a conclusion wraps up the main points of this report.

Value Creation in Management Accounting

Jan 13 2021 Value creation is at the heart of an economic enterprise, defining its capability to

serve customers and generate profits and growth. This fact has led to an ever-increasing set of tools and techniques that start with customers, focusing on serving their preferences from the very inception of a product until its disposal. And this data is required to implement a value creation approach that has its roots in the Management Accounting System (MAS). The resulting model is called the Value-based Cost Management System (VCMS). If you or any manager want to take the lessons you learned in product development, process management, and marketing, this book will help you extend this knowledge to your MAS. This book makes this transformation both logical and easy to implement, with a focus on the new types of information that can be garnered when the MAS is modified to fit the value creation approach. The authors of the book will provide, upon request, a simplified automated data collection template that will ease the implementation process.
