[Prealgebra](#) Apr 27 2022 "Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.

*Your Body Knows the Answer* Jan 31 2020 A manual for Mindful Focusing—a new integration of Western psychology and Buddhist mindfulness techniques for accessing your inherent wisdom and solving life's problems Ever come up against one of those moments when life requires a response—and you feel clueless? We all have. But there's good news: you have all the wisdom you need to respond to any situation, even the “impossible” ones. It's a matter of tuning in to your felt sense: that subtle physical sensation that lives somewhere between your conscious and subconscious mind and that can be accessed through Focusing—the well-known method developed by the psychologist Eugene Gendlin. David Rome's technique of Mindful Focusing unites Gendlin's method with Buddhist mindfulness practices to provide a wonderfully effective method for accessing your felt sense—so you can problem solve, deal with challenges, and respond honestly and creatively to the world around you.

*Science Teaching Reconsidered* Aug 27 2019 Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. Science Teaching Reconsidered provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.

**Phenomenology of Creativity** Jun 05 2020 The book presents a contrasting study of the views of ancient Indian, Chinese, Greek, Middle Eastern, and Russian philosophers on creativity. It also discusses the subject of creativity as viewed by Freud, Jung, Adler, the Gestalt school, and other prominent Western psychologists. A special place is provided for an overview of the history of Soviet psychology, and of the revival of psychology in Azerbaijan after the fall of the Soviet Union. The author emphasizes the importance of the social environment in determining the development of the personality. He states that most personal activity is directed at serving the values of the surrounding society, not the values of the person himself. The author considers that creativity is a psychic defense mechanism which people use to solve everyday problems in order to restore their inner and outer equilibrium. Samad Seyidovs study of creativity comes at the right time and from the right place. Not only are we passing through a period of rapid change, particularly in such fields as nanotechnology, neuroscience, physiological psychology, and genetics, but also the participants in this change are no longer limited to a small group of western countries, but are increasingly appearing in different parts of the world. If the social upheaval that these changes are having in established societies is great, it is even greater in newly emerging societies. Are we equipped to manage these changes, and can the creative arts and sciences join to interpret them, drawing on their varied traditions in order to do so? That is surely the vital question that we carry away from Professor Seyidovs important study of personality and creativity. Prof. Eleni Karamalengu, National & Kapodistrian University of Athens

[Drawdown](#) Feb 23 2022 • New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, Vox “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

[The Zen of Therapy](#) Jan 01 2020 “A warm, profound and cleareyed memoir. . . this wise and sympathetic book’s lingering effect is as a reminder that a deeper and more companionable way of life lurks behind our self-serious stories.”—Oliver Burkeman, New York Times Book Review A remarkable exploration of the therapeutic

relationship, Dr. Mark Epstein reflects on one year’s worth of therapy sessions with his patients to observe how his training in Western psychotherapy and his equally long investigation into Buddhism, in tandem, led to greater awareness—for his patients, and for himself For years, Dr. Mark Epstein kept his beliefs as a Buddhist separate from his work as a psychiatrist. Content to use his training in mindfulness as a private resource, he trusted that the Buddhist influence could, and should, remain invisible. But as he became more forthcoming with his patients about his personal spiritual leanings, he was surprised to learn how many were eager to learn more. The divisions between the psychological, emotional, and the spiritual, he soon realized, were not as distinct as one might think. In *The Zen of Therapy*, Dr. Epstein reflects on a year’s worth of selected sessions with his patients and observes how, in the incidental details of a given hour, his Buddhist background influences the way he works. Meditation and psychotherapy each encourage a willingness to face life's difficulties with courage that can be hard to otherwise muster, and in this cross-section of life in his office, he emphasizes how therapy, an element of Western medicine, can in fact be considered a two-person meditation. Mindfulness, too, much like a good therapist, can “hold” our awareness for us—and allow us to come to our senses and find inner peace. Throughout this deeply personal inquiry, one which weaves together the wisdom of two worlds, Dr. Epstein illuminates the therapy relationship as spiritual friendship, and reveals how a therapist can help patients cultivate the sense that there is something magical, something wonderful, and something to trust running through our lives, no matter how fraught they have been or might become. For when we realize how readily we have misinterpreted our selves, when we stop clinging to our falsely conceived constructs, when we touch the ground of being, we come home.

The course is usually taught with a large amount of student inquiry, and this text is written to help facilitate this. Four main topics are covered: counting, sequences, logic, and graph theory. Along the way proofs are introduced, including proofs by contradiction, proofs by induction, and combinatorial proofs. The book contains over 470 exercises, including 275 with solutions and over 100 with hints. There are also Investigate! activities throughout the text to support active, inquiry based learning. While there are many fine discrete math textbooks available, this text has the following advantages: It is written to be used in an inquiry rich course.
