**Botanical Results of the Sessé & Mociño Expedition (1787-1803)** Jan 01 2020 This is an annotated list of about 7500 names of plants (mostly Latin binomials) that have been generated during the last 200 years as a result of the activities of an official Spanish expedition (devoted to natural history) that began its work in Mexico in 1787 and closed out its work in the New World in 1803. The relevant names, whether officially published or existing only as manuscript names, are those that usefully can be documented to some degree, in order that a researcher may hope to identify the plant to which a name applies. Identification of the plants may be possible if their original geographic source is known, if an associated carefully drawn description, detailed illustration or a preserved specimen is available, or from a combination of the above.

**Shadow Born** Aug 08 2020 Chicago Police Detective Brooke Chandler is keeping a secret... and if she's not careful, it could get her killed. Brooke is no stranger to the supernatural. In Chicago, vampires are just as prevalent as drug lords, and infinitely more bloodthirsty. So when her partner and fiancé dies in a mysterious fire while chasing down a lead in Salem, she suspects something dark and otherworldly is at play. Blessed with the ability to see into the past by touching inanimate objects, Brooke transfers to the Salem PD, hoping her talent will help her get to the bottom of things. Between dodging assassination attempts and being stonewalled at every turn, the going is tough. Add in a mysterious fae club owner with secrets of his own and a personal grudge against her, and it becomes nearly impossible. If Brooke wants to play in the supernatural sandbox, she's going to have to roll up her sleeves and get dirty. But how many people will have to die for Brooke to discover the truth about her fiancé? Find out what lurks in the SHADOWS OF SALEM in SHADOW BORN, the latest Urban Fantasy hit readers are comparing to Karen Marie Moning and Patricia Briggs.

**Incorrigible: Secrets Past & Present - Part One / Entrapments** Aug 20 2021 Even pacifists have their limits. Being a partner in genocide is unimaginable for a peaceful, inept shape shifter like Grainne. But when her husband Slyxx holds her medieval homeland hostage for a seemingly worthless ransom she doesn't have, the inconceivable happens. Despite growing despair, Grainne can't let go of believing that survivors do exist, and it's up to her to find them. When she detects an error in translation of a set of mysterious scrolls penned by a missing order of priestesses, she resolves to find the women she believes can lead her to survivors. What Grainne doesn't realize is that she already knows the missing priestesses, and some of them are working to stop her from uncovering a secret alliance threatening her world. Even worse, the key to saving her world is inside of her, and someone will stop at nothing to have it. Grainne is about to learn just how naïve she really is when she discovers the stars aren't what she thought they were . . . and neither is she.

**Imagery in Conrad Ferdinand Meyer's Prose Works** Feb 11 2021 This study examines in detail the role of imagery in Conrad Ferdinand Meyer's prose works. It shows how intricately formed patterns of imagery impart to Meyer's prose its characteristic flavor and set him apart among the poetic realists of his period. To start, the linguistic forms of Meyer's metaphorical language are analyzed. Separate chapters then probe the rich clusters of imagery and focus on their characterizing and structural functions. They reveal how images produce oblique perspectives that give rise to an ironic shadow play between appearance and reality. The conclusion concentrates on Der Heilige, the single work that best exemplifies how images are instrumental in creating the complex weave of Meyer's narrative. The nature of Meyer's imagery points to the new wave of symbolism which was soon to make its impact on German literature.

**The Eponym Dictionary of Amphibians** Jun 17 2021 New species of animal and plant are being discovered all the time. When this happens, the new species has to be given a scientific, Latin name in addition to any common, vernacular name. In either case the species may be named after a person, often the discoverer but sometimes an individual they wished to honour or perhaps were staying with at the time the discovery was made. Species names related to a person are 'eponyms'. Many scientific names are allusive, esoteric and even humorous, so an eponym dictionary is a valuable resource for anyone, amateur or professional, who wants to decipher the meaning and glimpse the history of a species name. Sometimes a name refers not to a person but to a fictional character or mythological figure. The Forest Stubfoot Toad *Atelopus farci* is named after the FARC, a Colombian guerrilla army who found refuge in the toad's habitat and thereby, it is claimed, protected it. Hoipollo's Bubble-nest Frog *Pseudophilautus hoipolloi* was named after the Greek for 'the many', but someone assumed the reference was to a Dr Hoipollo. Meanwhile, the man who has everything will never refuse an eponym: Sting's Treefrog *Dendropsophus stingi* is named after the rock musician, in honour of his 'commitment and efforts to save the rainforest'. Following the success of their Eponym Dictionary of Reptiles, the authors have joined forces to give amphibians a similar treatment. They have tracked down 1,609 honoured individuals and composed for each a brief, pithy biography. In some cases these are a reminder of the courage of scientists whose dedicated research in remote locations exposed them to disease and even violent death. The eponym ensures that their memory will survive, aided by reference works such as this highly readable dictionary. Altogether 2,668 amphibians are listed.

*The Mar Chiquita Salt Lake (Córdoba, Argentina)* Jan 13 2021 This book provides a comprehensive, updated syntheses of all the information available on Mar Chiquita, covering various aspects of the geography, geological history, biology and ecology of the site, as well as a detailed analysis of the current land-use patterns, environmental threats, and conservation issues. Mar Chiquita, located in the province of Cordoba, Argentina, is a protected wilderness area that includes South America's largest saline lake and wetland. It has a very rich bird biodiversity, including three of the six species of flamingos that exist in the world, and high numbers of intercontinental migratory shorebirds. For this reason, the area has been declared an International Site by the Ramsar Convention on Wetlands of International Importance, and also a Site of Hemispheric Importance by the Western Hemisphere Shorebird Reserves Network. Largely unknown until very recently, particularly in terms of the English literature, the site is rapidly gaining international visibility, not only in terms of scientific research, but also as site of interest for the nature lovers around the globe. Written in a language accessible to the non-specialists, the book focuses on integrating the dynamic, functional processes in the ecosystem, while at the same time providing the necessary descriptive information. Accordingly, it is of interest to scientists from diverse disciplines interested in saline wetlands, as well as to students, managers, and the general public.

*Neotropical Diversification: Patterns and Processes* Sep 08 2020 This book provides a comprehensive overview of the patterns of biodiversity in various neotropical ecosystems, as well as a discussion on their historical biogeographies and underlying diversification processes. All chapters were written by prominent researchers in the fields of tropical biology, molecular ecology, climatology, paleoecology, and geography, producing an outstanding collection of essays, synthetic analyses, and novel investigations that describe and improve our understanding of the biodiversity of this unique region. With chapters on the Amazon and Caribbean forests, the Atlantic rainforests, the Andes, the Cerrado savannahs, the Caatinga drylands, the Chaco, and Mesoamerica – along with broad taxonomic coverage – this book summarizes a wide range of hypotheses, views, and methods concerning the processes and mechanisms of neotropical diversification. The range of perspectives presented makes the book a truly comprehensive, state-of-the-art publication on the topic, which will fascinate both scientists and general readers alike.

*Wardbreaker* Jul 31 2022 A city full of vampires. A dark ritual. A runaway determined to stay hidden. Lillim Callina was still trying to figure out how to live like a normal girl when the vampires attacked. Now, this former demon hunter must decide if staying hidden is more important than saving her new home from the largest vampire infestation she has ever seen. The only problem is, if she stops the vampires, the people hunting her just may find her, and they aren't too fond of deserters. Wardbreaker is the first prequel in The Lillim Callina Chronicles, an urban fantasy series and takes place approximately one year before the first book, Kill it with Magic.

**Kill It With Magic** Nov 10 2020 Sixteen-year-old Lillim Callina is good at two things: running away and magic. Now, Lillim's half-demon ex-boyfriend is contacting her for help, she has somehow gotten herself mixed up in a kidnapping, and her long-dead rival has risen from the grave. So when a dragon plotting to take over the world offers her a choice- work for him or else- Lillim Callina is going to choose else.
