ONLINE PAYMENT SOLUTIONS Jul 22 2022 In the first Russian textbook on electronic payments Dmitry Artimovich summarized his ten-year experience in the field. Online Payment Solutions uncovers the nuances of acquiring and analyzes in detail the rules of Visa and MasterCard payment systems. This book is conceived as a tutorial for people professionally working in the field of Internet acquiring, experts in online trade, as well as for the general public interested in the topic of electronic payments. The textbook focuses on the emergence of international payment systems and the reasons that put them on that particular path of development. Each chapter is supplemented with questions for self-control, allowing the reader to use it as a textbook. In addition, the author attempts to reveal the weaknesses and peculiarities of the development of payment card payment systems in Eastern Europe, as well as the imperfections of the Russian and European legislation. The book contains an extensive comparison of the implementation of payment system rules in different countries.

Investing in Interventions That Address Non-Medical, Health-Related Social Needs Jan 04 2021 With U.S. health care costs projected to grow at an average rate of 5.5 percent per year from 2018 to 2027, or 0.8 percentage points faster than the gross domestic product, and reach nearly \$6.0 trillion per year by 2027, policy makers and a wide range of stakeholders are searching for plausible actions the nation can take to slow this rise and keep health expenditures from consuming an ever greater portion of U.S. economic output. While health care services are essential to health, there is growing recognition that social determinants of health are important influences on population health. Supporting this idea are estimates that while health care accounts for some 10 to 20 percent of the determinants of health, socioeconomic factors and factors related to the physical environment are estimated to account for up to 50 percent of the determinants of health. Challenges related to the social determinants of health at the individual level include housing insecurity and poor housing quality, food insecurity, limitations in access to transportation, and lack of social support. These social needs affect access to care and health care utilization as well as health outcomes. Health care systems have begun exploring ways to address non-medical, health-related social needs as a way to reduce health care costs. To explore the potential effect of addressing non-medical health-related social needs on improving population health and reducing health care spending in a value-driven health care delivery system, the National Academies of Science, Engineering, and Medicine held a full-day public workshop titled Investing in Interventions that Address Non-Medical, Health-Related Social Needs on April 26, 2019, in Washington, DC. The objectives of the workshop were to explore effective practices and the supporting evidence base for addressing the non-medical health-related social needs of individuals, such as housing and food insecurities; review assessments of return on investment (ROI) for payers, health systems, and communities; and identify gaps and opportunities for research and steps that could help to further the understanding of the ROI on addressing non-medical health-related social needs. This publication summarizes the presentations and discussions from the workshop.

Government 3.0 – Next Generation Government Technology Infrastructure and Services Oct 21 2019 Historically, technological change has had significant effect on the locus of administrative activity, cost of carrying out administrative tasks, the skill sets needed by officials to effectively function, rules and regulations, and the types of interactions citizens have with their public authorities. Next generation Public Sector Innovation will be “Government 3.0” powered by innovations related to Open and big data, administrative and business process management, Internet-of-Things and blockchains for public sector innovation to drive improvements in service delivery, decision and policy making and resource management. This book provides fresh insights into this transformation while also examining possible negative side effects of the increasing openness of governments through the adoption of these new innovations. The goal is for technology policy makers to engage with the visions of Government 3.0. Researchers should be able to critically examine some of the innovations described in the book as the basis for developing research agendas related to challenges associated with the adoption and use of some of the associated technologies. The book serves as a rich source of materials from leading experts in the field that enables Public administration practitioners to better understand how these new technologies impact traditional public administration paradigms. The book is suitable for graduate courses in Public Sector Innovation, Innovation in Public Administration, E-Government and Information Systems. Public sector technology policy makers, e-government, information systems and public administration researchers and practitioners should all benefit from reading this book.

The Evolution of Law against Payment Frauds Sep 12 2021 This book examines the evolution of legal institutions in containing and tackling fraudulent activities plaguing payment systems (‘payment fraud’, e.g. forged cheques, wrongful payment instructions, etc.) in Asia, focusing on laws in Greater China and Singapore. In the past century, the payment system has invited much innovation, changing the modes of payments from exchanging cash and coins to the use of cards, wire transfers and other new types of payment instruments or services (e.g. bitcoins or QR code payments). As the nature of payment services is to move money from one place to another, it naturally attracts fraudsters. Even with advanced computer technology, payment fraud is still rampant in the market, causing billions of dollars in losses globally per annum. Through an examination of payment instruments and associated frauds over time, the book illustrates a shifting trend of legal solutions from criminal sanctions and civil compensation to a gradual focus on regulations of payment intermediaries. This trend reflects the complexity of payment systems and the challenge of protecting them. The book also identifies the underlying actors and institutional characteristics driving the evolution of legal institutions to deal with payment fraud and illustrates how the arrival of new technology may affect the market and thus the evolution of legal institutions. The book will help readers to better understand the interaction between technology, the market and law and help regulators, financial institutions, practitioners and end users, as well as about payment fraud and corresponding legal responses.

Information Economy Report 2015 Dec 03 2020 Electronic commerce (e-commerce) is rapidly transforming the way in which enterprises are interacting among each other as well as with consumers and governments. Despite important potential benefits, businesses and consumers in developing countries were for a long time slow to exploit e-commerce. As a result of changes in the evolving landscape for information and communications technologies (ICTs), this pattern is now changing, and e-commerce is growing rapidly in emerging markets and developing economies. Against this background, this publication revisits the potential opportunities and risks of e-commerce and examines how countries can benefit the most from the phenomenon in today's Information Society. Using official statistics and private sector data, it provides an up-to-date review of global and regional trends related to e-commerce in view of changes in the ICT landscape, focusing on developing countries while drawing lessons from developed countries.

Operational Resilience in Digital Payments: Experiences and Issues Feb 23 2020 Major operational incidents in payment systems suggest the need to improve their resiliency. Meanwhile, as payment infrastructures become more digitalized, integrated, and interdependent, they require an even higher degree of resilience. Moreover, risks that could trigger major disruptions have become more acute given the rise in power outages, cyber incidents, and natural disasters. International experiences suggest the need to strengthen reliability objectives, redundancies, assessment of critical service providers, endpoint security, and alternative arrangements

The Global Findex Database 2017 Aug 19 2019 In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, the Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalfindex.

Law and Regulation of Mobile Payment Systems Jun 09 2021 Over the last ten years mobile payment systems have revolutionised banking in some countries in Africa. In Kenya the introduction of M-Pesa, a new financial services model, has transformed the banking and financial services industry. Giving the unbanked majority access to the financial services market it has attracted over 18 million subscribers which is remarkable given that fewer than 4 million people in Kenya have bank accounts. This book addresses the legal and regulatory issues arising out of the introduction of M-Pesa in Kenya and its drive towards financial inclusion. It considers the interaction between regulation and technological innovation with a particular focus on the regulatory tools, institutional arrangements and government decisional processes through the examination as a whole of its regulatory capacity. This is done with a view to understanding the regulatory capacity of Kenya in addressing the vulnerabilities presented by technological innovation in the financial industry for consumers after financial inclusion. It also examines the way that mobile payments have been regulated by criticising the piecemeal approach that the Central Bank of Kenya has taken in addressing the legal and regulatory issues presented by mobile payments. The book argues there are significant gaps in the regulatory regime of mobile banking in Kenya.

Bangladesh Rapid eTrade Readiness Assessment Mar 26 2020 The eTrade Readiness Assessment of Bangladesh focuses on examining seven key policy areas that are most relevant for e-commerce. Impact Assessment of Blockchain-enabled Smart Contracts on the Visibility of Construction Payments Jun 21 2022 Cash flow is crucial to the financial wellbeing of construction and engineering firms. Construction progress payments, constituting a big portion of cash flow on projects, are currently processed using monthly payment applications. These applications provide only an aggregate view of payments and cannot support the wide range of information needs faced by different stakeholders. As a result, firms often have partial visibility into the flow of cash and its interconnection with construction progress. Achieving visibility is particularly challenging when stakeholders need to employ a more granular look into their financial data. Blockchain-enabled smart contracts have a potential to address these limitations due to their innovative approach toward decentralized consensus in peer-to-peer networks. The technology may provide a means of directly conditioning payments on product flow, not only increasing the integration of the two flows but also enhancing visibility. The literature has mostly remained theoretical; the engineering and construction industry lacks an understanding of whether this technology has a clear role to play, how it can be used, and what its impact will be. To address this gap, this thesis reports on a study of the impact of blockchain-enabled smart contracts on the visibility of construction progress payments. The research objectives were twofold: 1) assessing the information visibility in today's digital payment solutions and those relying on blockchain-enabled smart contracts; this comparison is drawn at various levels of trade, product, and temporal

granularity; and 2) assessing the resilience of conventional and smart contract-enabled payment solutions in the face of increased granularity. The Charrette Test Method was employed to compare the visibility in the two payment solutions, one based on a leading commercial software used in the industry and one based on smart contracts. Both payment solutions were used to visualize 3 months of payments for indoor finishing work at a commercial construction project. Charrette test participants were assigned to either solution and asked to identify the total amount of payments under 12 different scenarios. Their performances were assessed using the three metrics of information completeness, information accuracy, and information latency. The primary findings are threefold: 1) blockchain-enabled smart contracts can enhance visibility in terms of information accuracy and completeness; the improvements in information latency, however, were not statistically significant; 2) visibility benefits of smart contracts are achieved only when firms need a more granular look into their payment data (the flows of cash and product). For inquiries with the lowest granularity (total amount of payments to a general contractor in a month), smart contracts provided no benefit over state-of-the-art payment solutions used in the industry; and 3) in contrast to conventional payment systems, blockchain-enabled smart contracts were observed to be resilient in the face of increased granularity, never suffering declines in visibility. The theoretical contributions of this work include 1) impact assessment of blockchain-enabled smart contracts on the visibility of payments and at different levels of information granularity; 2) assessing the robustness of conventional payment systems and those based on blockchain-enabled smart contracts in the face of increased granularity; 3) identifying aspects of visibility that are improved using blockchain-enabled smart contracts.

Autonomous and Integrated Parking and Transportation Services Jan 24 2020 In this book, the author outlines a Robust Web Parking, Truck and Transportation Portal (RWPTTP) for integrating parking and transportation services – a revolutionary approach in contrast to incremental change for managing traffic congestion. Autonomous vehicle technology, artificial intelligence, internet of things (IOT), and other interconnected hardware and software tools will assist autonomous parking and transportation services and provide next-century infrastructure for consolidated transportation customer services. The book highlights currently available autonomous parking and transportation technologies, and the development of an integrated and intelligent transportation service/system (IITS) platform, with specific use of technologies to reconfigure the transportation industry. The author also suggests many regulatory and policy changes to simplify data collection, traffic operation, introduction of a duplicate transportation system using light rail (LRs) and high speed rail (SPRs), and redistribution of parking spaces along such routes, using renewable energy.
